

Job Opening

Software Quality Assurance Engineer

Who we are

The team behind LiveDOOH's AdTech is composed of highly experienced specialists in the fields of online advertising, software development, algorithms and data analysis.

With that in mind, we set of 5 years ago to create something different. To create the first intelligent ad server for the outdoor advertising industry. Our software is used in major smart cities around the world where the digital transformation is taking place full speed. Find more about us at www.livedooh.com.

LiveDOOH is looking for Quality Software Engineers with innovative problem-solving skills fueled by a desire to help make our platform better each day.

Consider joining us!

Job Description

As a Software Quality Assurance Engineer you will work with us on the continuous development of our cloud platform. You are used to working self-motivated, attention to detail driven, think outside the box and act agile. You are interested in using cutting edge dynamic web technologies to give our customers the best user experience. Ideally you also have a passion for quality software.

Become a part of our team and engage in the following responsibilities:

- Define and implement test cases for different software components
- Identify and document user scenarios for testing software user interfaces
- Extend and maintain current test case collections
- Communicate daily with development and product management teams
- Support in the improvement of test processes
- Elaborate test results documentations

Your responsibilities

- High level of self initiative when thinking about software quality and testing
- You think enthusiastically about software testing processes
- Attention to detail when testing software
- Understanding of best practices for software quality assurance

What you need to bring

- University degree in Computer Science or equivalent experience (Entry - level candidates are welcomed)
- Excellent command / highly proficient in spoken and written English
- Other language skills are a plus
- Ability to work independently and in team
- Understanding of object-oriented programming language
- Understanding of modern Software Architecture
- Optional: experience with JIRA and Confluence tools
- Really nice if you have: experience writing automated tests with tools such as Selenium WebDriver, Geb, etc.
- Optional: experience creating scripts in bash, Javascript or Python a big plus
- Optional: experience working in a SCRUM team
- Optional: basic understanding of Linux file system and system logs

We offer ...

- Competitive salary
- Mentorship across disciplines
- Cutting-edge hardware and development tools
- An exciting job in a young and growing company - one where you can see your ideas fly and where you can evolve
- A dynamic team with kind and highly qualified colleagues
- Opportunity for advancement
- A flat hierarchy with no excessive bureaucracy
- Multi-national, multicultural, cosmopolitan and transparent work environment
- Flexible working hours
- Free healthy snacks, great coffee and soft drinks
- Private Health insurance
- Sport benefits
